**Subject: UXO/Mine Probability Assessments for the Squad Ops MQ1/9 project,  
Kandahar Province, Dand District.**

A UXO/Mine probability assessment was conducted December 17, 2011 for the site referenced in the subject line. The area is known as the Squad OPS MQ1/9, Kandahar Airfield. From the data provided for this project including a site visit, an assessment has been made that the area located within the boundaries of grid coordinates:

41R QQ 7015289853  
41R QQ 7021789921  
41R QQ 7028189803  
41R QQ 7022189759

can be classified as a LOW probability in regards to a UXO/Mine threat. This area may have been cleared prior to USACE record keeping by Coalition military forces or United Nations Mine Clearance Personnel in which a clearance certificate may not have been generated.

The land is currently and will be occupied by US forces. This site has seen numerous construction and grading projects and road and foot traffic in the past.

When an assessment of LOW probability is applied to this site it only delineates that the site appeared to be free of UXO/Mines from the data provided and encountering UXO or Mines is unlikely. If ANY UXO/Mines are located on a site deemed LOW probability, all work in the immediate area must cease until further assessment can be conducted by the UN Mine Action Coordination Center. Also please notify the AES project construction representative for further guidance.

**Subject: UXO/Mine Probability Assessments for the 451 AEW SCIF Kandahar Province, Afghanistan.**

A UXO/Mine probability assessment was conducted December 17, 2011 for the site referenced in the subject line. The area is known as the **451 AEW SCIF**. From the data provided for this project including a site visit, an assessment has been made that the area located within the boundaries of grid coordinates:

41R QQ 7026690129  
41R QQ 7028490144  
41R QQ 7030790113  
41R QQ 7028990098

can be classified as a LOW probability in regards to a UXO/Mine threat. This area may have been cleared prior to USACE record keeping by Coalition military forces or United Nations Mine Clearance Personnel in which a clearance certificate may not have been generated.

The developed portions of the land are occupied by Coalition Forces. This site has seen numerous construction and grading projects and road and foot traffic in the past.

When an assessment of LOW probability is applied to this site it only delineates that the site appeared to be free of UXO/Mines from the data provided and encountering UXO or Mines is unlikely. If ANY UXO/Mines are located on a site deemed LOW probability, all work in the immediate area must cease until further assessment can be conducted by the UN Mine Action Coordination Center. Also please notify the AES project construction representative for further guidance.
